

5 UNBREAKABLE INTERNET FEATURES

BUSINESS CLOUD USERS SHOULD DEMAND TO ELIMINATE DOWNTIME

“CONNECTIVITY IS PRODUCTIVITY”

Iqbal Quadir

Seamless Link Failover

Time is money, you can't afford to have an outage extended by a slow manual response.

Unbreakable Internet is a “hands free” solution that keeps you online before you even notice there was a link outage.

Business apps like Office365 & Salesforce are in public clouds, don't leave them vulnerable.

Unbreakable Internet protects all cloud apps.

Protect All Cloud Applications

Zero Disruptions of Live Sessions

Real-time apps such as live voice & video calls will drop when the connection goes down.

For non-stop productivity, a connectivity solution must keep live sessions alive through link outages with no dropped calls.

It starts with staying connected to the cloud, but bandwidth is a resource to be optimized.

Choose a smart failover solution that controls all connections in active or standby mode and dynamically steers traffic based on link health.

Intelligently Manage All Connections

Protect Quality for Cloud Apps

Always-on cloud access helps you avoid downtime, but a slow or congested connection puts app quality at risk.

Get a smart cloud failover solution that knows how to protect and prioritize business apps for optimal productivity.

FAILOVER PROTECTION = SMART BUSINESS INVESTMENT

Adaptiv Networks solutions offer non-stop cloud connectivity while delivering maximum bandwidth utilization across all your applications.
