

SD-WAN FOR SERVICE PROVIDERS

Does your SD-WAN solution “check all the boxes?”

All SD-WAN solutions sound the same, but CSPs and MSPs who host cloud services have unique needs. Asking the right questions helps Service Providers select an SD-WAN that truly fits their needs.

Is your SD-WAN a turnkey solution for service providers that includes a multi-tenant network of cloud-hosted gateways and multi-tenant cloud orchestrator?

- Our Network-as-a-Service delivery model makes SD-WAN easy to sell, install, and manage.
- Our cost-effective solutions fit SMB budgets and scale to the needs of multi-site enterprises.
- Adaptiv provides the secure SD-WAN cloud network, orchestration portal, and edge devices.

Does your SD-WAN offer top-end capabilities to ensure network reliability, performance, security, and manageability?

- We offer powerful features backed by the largest patent portfolio in the SD-WAN industry.
- Our solutions fit branch offices, remote workers, data centers, and Azure/AWS environments.
- Our SASE offering is a simple add-on service option for fully integrated cloud-based security.

Does your SD-WAN vendor manage support escalations, and have options for private hosting and white-labeling to optimize your services and margins?

- Our support team provides hands-on training and manages service escalations.
- We offer optional private SD-WAN gateways to directly connect your data centers.
- We offer white-label options for the service orchestration portal and marketing collateral.

Adaptiv Networks Solutions

Adaptiv Networks offers a unique cloud-based SD-WAN solution that’s designed for channels to succeed. We’re a 100% channel-driven technology vendor offering a partner program that fits the individual needs of CSPs and MSPs who host their own cloud services.
