

ADAPTIV CLOUD PROTECT

Add a simple layer of web filtering security

Cloud Protect is our cloud-based URL and DNS filtering solution designed to meet the needs of small to mid-sized enterprises (SMEs). With Cloud Protect, you can secure your network with the simplicity and confidence of a managed service while enjoying optimal reliability and performance for authorized business applications.

Simplicity and performance in one solution

Cloud Protect is a cloud-based network security solution that delivers intelligent protection for your network within the constraints of your SME budget. Powered by our network of Secure Cloud Gateways, Cloud Protect makes it easy for you to control access to over 20 million websites by simply choosing which security profile is right for your business. Our URL database is continually updated to ensure that your network blocks access to malicious websites and remains secure from emerging threats.

SECURE NETWORK PERIMETER

Our SD-WAN edge device blocks unknown or unauthorized traffic from accessing the branch network.

PRIVATE CLOUD CONNECTIVITY

Our encrypted SD-WAN tunnel keeps data private between the branch and our secure cloud gateway network.

CLOUD-BASED URL FILTERING

Cloud Protect instantly blocks access to any malicious, unauthorized or unknown websites.

CONTROL ACCESS TO
20 MILLION+
SITES

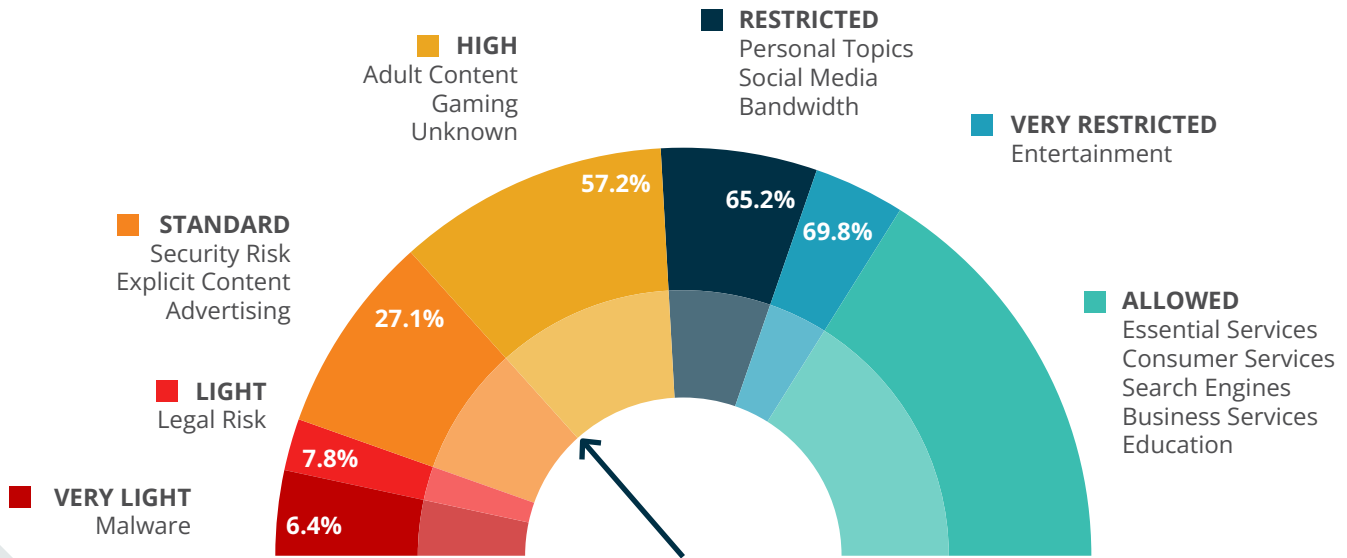

Why Adaptiv SD-WAN with Cloud Protect?

Organizations have historically relied on branch office firewalls for URL filtering, but firewalls can be expensive and complex to set up and maintain. Due to the cost and the complexity of deploying, configuring and maintaining firewalls, the vast majority of small and mid-sized businesses remain exposed to web-based security threats.

Adaptiv SD-WAN creates a “zero trust” network posture that includes encrypted connectivity and a stateful firewall that block unauthorized access. Cloud Protect adds a cloud-managed URL filtering protection that is continuously updated so your internet security policy never goes out of date.

Easily add a layer of web-filtering security to your network

Cloud Protect controls access to over 20 million websites, simply choose the setting that’s right for you.

THE BASE LAYER OF SD-WAN SECURITY

Using any internet connections, Adaptiv SD-WAN combines encryption with a stateful firewall to create a “zero-trust” network posture that blocks all unauthorized traffic from the outside.

EFFORTLESS SECURITY POLICY MANAGEMENT

Cloud Protect uses pre-built policy templates that simplify web filtering for over 20 million websites, you control which categories are blocked or allowed with just a few clicks.

SECURITY THAT NEVER GOES OUT OF DATE

Cloud Protect eliminates the hassle of firewall management, your protection is continuously updated as part of the cloud-managed service with no firmware patches to install.

ZERO DROPOFF IN BRANCH THROUGHPUT

Cloud Protect scales in our secure SD-WAN cloud, there’s no overhead on the edge appliance and no added latency so you avoid the usual throughput dropoff of next-gen firewalls.

ADDED PROTECTION FOR HYBRID WORKERS

With Adaptiv My Connect your remote workers can enjoy simple, reliable and encrypted connectivity that extends your web-filtering policy protection to employees who work from anywhere.

EASILY ADD BANDWIDTH WHEN YOU NEED IT

Unlike firewall appliances you can quickly outgrow, Adaptiv SD-WAN with Cloud Protect grows with your business, simply add more connections and increase your license speed whenever you want.

* Cloud Protect is not intended to replace properly managed next-generation firewalls; for a complete cloud-based security solution with deep content inspection consider Adaptiv Cloud Secure.

Adaptiv Networks Solutions

Smart, secure business networks that deliver superior cloud performance with the simplicity of a managed service.
