

ADAPTIV WEB PROTECT

Firewall-as-a-Service with cloud-based URL and web filtering

Web Protect combines cloud-based URL filtering with multi-site firewall policy orchestration via Adaptiv Cloud Orchestrator (ACO). This enhancement adds an extra layer of network security that saves time, reduces complexity, and improves consistency across SD-WAN sites.

Simplicity and performance in one solution

Web Protect is a Firewall-as-a-Service solution that secures your network within the constraints of your SME budget. Powered by our network of secure cloud gateways and managed through our Adaptiv Cloud Orchestrator, Web Protect provides cloud-based firewall management plus web filtering protection that controls access to over 20 million websites. Choose from our ready-made templates, or build a custom security profile that blocks malicious websites and unwanted applications. Our URL database is continually updated to keep you protected against web-based threats.

SECURE NETWORK PERIMETER

Our SD-WAN edge device blocks unknown or unauthorized traffic from accessing the branch network.

PRIVATE CLOUD CONNECTIVITY

Our encrypted SD-WAN tunnel keeps data private between the branch and our secure cloud gateway network.

CLOUD-BASED URL FILTERING

Web Protect instantly blocks access to any malicious, unauthorized or unknown websites.

CONTROL ACCESS TO
20 MILLION+
SITES

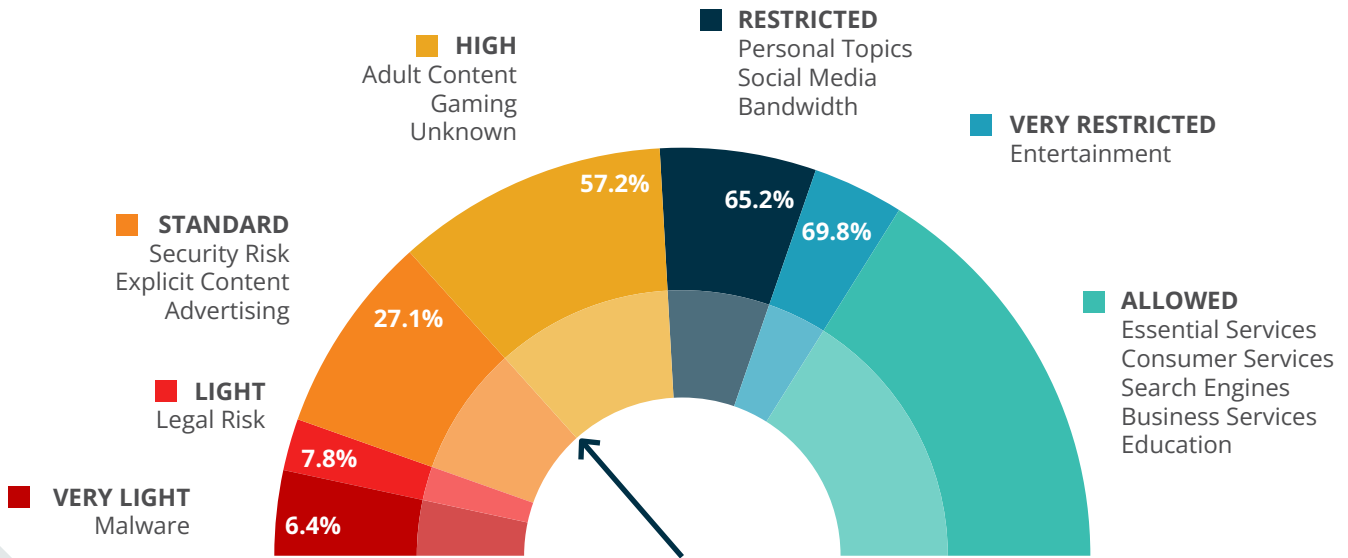

Why Adaptiv SD-WAN with Web Protect?

Organizations have historically relied on branch office firewalls for URL filtering, but these firewalls can be expensive and complex to set up and maintain. Due to the cost and the complexity of deploying, configuring and maintaining firewalls, the vast majority of small and mid-sized businesses remain exposed to web-based security threats.

Adaptiv SD-WAN creates a “zero trust” network posture that includes encrypted connectivity and a stateful firewall that block unauthorized access. Web Protect provides cloud-based orchestration to deliver a Firewall-as-a-Service experience, plus cloud-based URL filtering protection that is continuously updated so your internet security policy never goes out of date.

Easily add a layer of web-filtering security to your network

Web Protect controls access to over 20 million websites, simply choose the setting that's right for you.

THE BASE LAYER OF SD-WAN SECURITY

Using any internet connections, Adaptiv SD-WAN combines encryption with a stateful firewall to create a “zero-trust” network posture that blocks all unauthorized traffic from the outside.

CLOUD-BASED FIREWALL-AS-A-SERVICE

Web Protect increases IT efficiency with centralized firewall management to set up security policy rules for ports, protocols and applications through our Adaptiv Cloud Orchestrator.

EFFORTLESS URL FILTERING PROTECTION

Web Protect uses pre-built policy templates that simplify web filtering for over 20 million websites, you control which categories are blocked or allowed with just a few clicks.

SECURITY THAT NEVER GOES OUT OF DATE

Web Protect eliminates the hassle of firewall management, your protection is continuously updated as part of the cloud-managed service with no firmware patches to install.

ZERO DROPOFF IN BRANCH THROUGHPUT

Web Protect scales in our secure SD-WAN cloud. There's no overhead on the edge appliance and no added latency, so you avoid the usual throughput droppoff of next-gen firewalls.

ADDED PROTECTION FOR HYBRID WORKERS

With Adaptiv My Connect your remote workers can enjoy simple, reliable and encrypted connectivity that extends your web-filtering policy protection to employees who work from anywhere.

* Web Protect is not intended to replace properly managed next-generation firewalls; for an enterprise-grade cloud-based network security solution with deep content inspection consider adding **Adaptiv Network Protect**.

Adaptiv Networks Solutions

Smart, secure business networks that deliver superior cloud performance with the simplicity of a managed service.
